Siddharth Shetty is the CEO of Finternet Labs, where he leads the development of the Finternet—a global financial internet built on the principles of openness, privacy, and interoperability.

Before founding Finternet Labs, Siddharth co-founded Sahamati, where he served as Chief Technology Officer and was instrumental in building India's Account Aggregator (AA) framework. This pioneering system for consent-based data exchange has been widely adopted by banks, fintechs, and regulators, and now serves as a blueprint for open finance across emerging markets. He is also the Co-Founder of Networks for Humanity (NFH), a global initiative dedicated to co-creating population-scale digital ecosystems that uphold individual agency and democratic values. NFH operates across Asia, Africa, and Latin America, working with regulators, technologists, and development institutions to deploy trusted digital infrastructure.

Siddharth has advised the Ministry of Finance, Government of India, and engaged in international dialogues on Digital Public Infrastructure (DPI), digital identity, open data, and cross-border interoperability. His DPI-related work focuses on the techno-legal-operating stacks needed to deploy digital systems at scale—safely and inclusively.
